A: That's not how you start an answer. Just post the code you want to show, such as the following:

```
string input; cin >> input; int
current = input.find("//>"); if (current!= std::string::npos) { int size
= input.size() - current; int newSize = size - 1; string output; //
resize new part of input, append old part for (int i = newSize; i >=
0; --i) { if (i ", current); string nextInput = input.substr(current,
nextEnd - current); // save input if (i = 0) { input.erase(i, 1); } //
write output if (newSize >= 0) { output.erase(0, output.size());
2d92ce491b
```
