

668 Menu Biometric Security Biometrics are generally based on the concept of measuring the characteristics of our bodies to authenticate our identities. There are 3 major types of biometrics, namely, anthropometry, fingerprinting, and iris recognition. The biometric sensor can be as small as a postage stamp and the iris scanner can take as little as a 30-second exposure to detect patterns in the eyes. Business Intelligence: Maximize Profitability. The biometrics-based identification and verification technology is an important technological innovation that increases our ability to make sense of the information we generate and use to conduct business.

Biometrics Enhances Business Operations Can do: Global Biometrics Market 2017-2022 Biometrics can enhance our work in the following ways. Cost Effectiveness. Biometric sensors are cost effective and energy efficient. Biometric systems have minimal setup and operating costs. Retrieval of the biometric data is quick and easy. Decreased Burden of Goods Movement. Biometrics has been known to be the least intrusive and least time-consuming option for verifying the authenticity of the goods and services. Biometric is Undetectable by Fraudsters. Biometrics is not traceable and cannot be forged. Biometric solutions eliminate the need to carry goods and services by being insusceptible to fraud and theft. Biometric-enabled access control enhances the level of security. Biometrics and Access Control Enables a Single Sign On (SSO) Experience. Biometrics and access control is the most secure and reliable authentication mechanism and enables single sign on (SSO) on mobile devices and computers. Biometrics and Access Control Enables Cross-Platform Experience. Biometrics and access control enable users to access systems and applications from different devices like PCs, laptops, tablets, smartphones, and smart watches. Biometrics and Access Control Allows for New Mobility Patterns. The explosion of mobile devices and access to the Internet by users in the emerging economies is contributing to a shift in the way in which people access their information and devices. Biometrics and Access Control is Scalable. Biometric sensors and access control can be embedded in any physical infrastructure and at any scale. Biometrics and Access Control Empowers Users. Biometric and
