
Keymacro is a very powerful macro recorder and editor. It can capture keyboard actions and store them as simple macro commands. The user can then execute the stored macro commands as they would normally. The only difference is that any key can be used to execute the command, not just the ones intended to do so. This feature makes for an interesting programming application. This software is released under the GNU GPL version 2, or version 3, you must select in the license dialog. This is the first release of Keymacro as a GNU GPL software. Keymacro can capture keystrokes in windows, but not in dialog boxes. This is done by having a script running in the background. The command is then sent to the recording command (when the application is active) and afterwards the code is removed from the script. When the application is no longer active, the code is deleted from the script. For more information on the many useful features that can be captured with Keymacro, visit for more information. The modern Yamaha PG-SX organ uses 34 pipes. The colours of the organ are very easy to hear.

The organ has 3 manuals, which can be found in the upper part of the organ. The three manuals can be combined using the switch '3-MANUAL-GEAR'. The same work can be done in the lower part of the organ. There are also 2 keyboards. One keyboard is made of 3 manuals and one of 5, giving a total of 9 keys. The other keyboard is made of 4 manuals and one of 5 keys. This gives the possibility of 12 keys. The organ has a direct control pedal and 2 pedals for the hammer. In this case, the organ can be played by foot. The modern Yamaha PG-SX organ uses 34 pipes. The colours of the organ are very easy to hear.
