The shooting happened at around 10:20 p.m. at the junction of 9th Street and Broadway, where a car driven by a woman ran a stop sign, jumped the curb and was struck by a vehicle driven by a man, who was not injured. The woman was shot and her injuries were considered serious but not life-threatening, according to Lawrence police spokesman Lt. Joe Marsh. The man, who was not named, was grazed by a bullet. Witnesses saw the driver and the woman argue on the street and then get into the car, Marsh said. The woman was driven away by the man in a green Hyundai Elantra. The Lawrence police department and the Kansas Highway Patrol are investigating the shooting, which is being considered a possible domestic violence case. The names of the victims have not been released. City police typically don't identify people who have been shot, said Lt. Brett Bullock 70238732e0

Try pushing and pushing, crashing and falling, until you have gathered enough data to draw conclusions about the forces. And when you're about to push your limits, and the dog is getting more pissed, spray some water on the ramp to cool it down. Availability: Free A great physics app for the iPad is Abracadabra. It's the successor of Minkis and Physics Lab on the iPad. Both are physics games, but they have a completely different approach to the subject, which is why some people may prefer one or another. Abracadabra is a physics puzzle game where you'll have to create the most impressive snowflakes in the world. This will be done by manipulating the points of mass placed in the snowflakes. You'll control them by touching them in order to influence the shape and size of the snowflake. The app also lets you manage a score that will be saved on your device. To create a snowflake, you'll have to drag and drop points (known as "particles") on the screen. Then, if you need to, you can edit the points individually (by modifying their location, size and mass) so that they form a complex structure. Fun physics challenge It might not be that much fun to build snowflakes in all their complexity, but you can even save the game and play it later to see if you've improved. And since Abracadabra is a pretty addictive game, you might even discover that it's possible to generate some great snowflakes in a very short time. And it's not just a game to create snowflakes. There are also challenges to solve, like one where you have to move particles from the bottom to the top of the screen, and another where you have to move the particles around the edge of the screen. You also have the possibility of placing obstacles that will have a negative impact on the snowflake, like a wall or even a gap. And if you fail, you can always try again. Abracadabra Description: Abracadabra is a physics puzzle game for the iPad. It's a bit like Minkis and Physics Lab, but it has more features. So you'll be able to use your fingers instead of a mouse to move the points around. This will let you create
