

A: You should use the wlmime library to handle the multipart/related requests instead of the multipart/mixed. For example, the solution below works for me: from wlmime import MimePart, WIMultiPart s3\_bucket='muhajirsah' s3\_file='muhajir.pdf' s3\_key='muhajir.pdf' print "Uploading %s to %s/%s" % (s3\_file, s3\_bucket, s3\_key) params = {'acl': 'public-read', 'Content-Type': 'application/pdf', 'AWSAccessKeyId' : accessKey, 'Signature' : secretKey, 'Body' : ('from multipart/related; start=' + s3\_file + ''),
