Excluir /Download O K M A 1 N 3.8.2Q: What is the correct way to search for a "word" in Lucene The following function returns true: public static bool TestSearch() { String fieldValue = "ingredients"; return QueryBuilder.Rewrite(fieldValue).Term("Ingredient", "onion") .Should().BeTrue(); } But I think this is not correct way because "onion" should be considered a "word" in Lucene. What is the correct way to do it? A: The following should do the trick: public static bool TestSearch() { String fieldValue = "ingredients"; return QueryBuilder.Rewrite(fieldValue).Term("Ingredient", "onion") .Should().BeTrue(); } The main problem was that the fieldValue was not quoted, so "onion" was considered as one term. A: You can do it in the following way: public static bool TestSearch() { String fieldValue = "ingredients"; String[] searchTer 2d92ce491b
