
Dashboard Cola [Updated] 2022

Download

Dashboard Cola is an interactive dashboard builder tool for Windows. It can help you design and update dashboards for data visualization.

Dashboard Cola allows you to connect to a wide variety of data sources, such as SQL Server, Oracle, Firebird, MySQL, PostgreSQL, and SQLLite. It is also possible to connect to MS Analysis Services databases, Excel workbooks, and OLAP cubes. Key Features: 1) Connect to a variety of data sources, such as SQL Server, Oracle, Firebird, MySQL, PostgreSQL, SQLLite, Microsoft

Analysis Services, Excel workbooks, and OLAP cubes. 2) Create interactive dashboards, featuring various charts, gauges, pie charts, cards, maps, images, and tables. 3) Choose a suitable template from which to start your project. 4) Enter and edit data from the available data sources. 5) Select data filters, and have them display in the dashboard. 6) Drag and drop objects to easily add charts, pie charts, gauges, cards, maps, and tables to your dashboard. 7) Implement filters and sort data. 8) Connect to a running database, and have new data and updated data appear in your dashboard. 9) Add special effects,

such as shadows, 3D effects, background images, and transparency to your dashboard. 10) Optionally provide your own skins for the dashboard. 11) Insert hyperlinks into charts and tables, allowing users to perform actions like search the database. 12) Share and collaborate on dashboards with your team. 13) Import and export your dashboard designs to Power BI. 14) Schedule regular, timed, and recurring updates to your dashboard. 15) Export and print out copies of your dashboard. 16) Draw on the dashboard with markers and lines. 17) Apply theme color changes to your dashboard. 18) Specify how the

dashboard appears on your website. Key Features: 1) Supports and connects to a variety of data sources, including SQL Server, Oracle, Firebird, MySQL, PostgreSQL, SQLLite, Microsoft Analysis Services, Excel workbooks, and OLAP cubes. 2) Builds and maintains dashboards from a wide range of template designs, or designs you upload from your hard drive. 3) Drag and drop objects to easily add charts, pie charts, gauges, cards, maps, and tables to your dashboard. 4) Optionally change

Dashboard Cola [Win/Mac]

Include a simple macro definition file

containing the name of a macro-enabled worksheet file, a reference to that worksheet, and the macro to be applied. Such a file is used as a template, and can be reused and updated when creating new macros.

Subscript Macro Definition Include a simple macro definition file containing the name of a macro-enabled worksheet file, a reference to that worksheet, and the macro to be applied. Such a file is used as a template, and can be reused and updated when creating new macros.

Subscript Template

KEYDESCRIPTION Scrivener
Windows This article describes the

Windows version of Scrivener, which is the best known and most-used tool for creating and managing the content of a novel, short story, or screenplay.

Features: Introduction Document-based software is quite useful when you need to work on a large project, which is a problem that most people face from time to time. One solution, which can be found in many document-based software applications, is the ability to split one project into several documents. If a particular subject needs to be looked at from different angles, you can separate the related pieces of information in different documents. If some of the data do not

apply to the particular project at hand, you can still use them in the future for other purposes. Document-based software is widely used in the world of creativity, and Scrivener is one of the best known software applications of this type. With the help of Scrivener, a writer can divide a single project into several documents, which can be later used for multiple purposes. If, for example, you need to find a particular line of dialogue, you can access the document containing that particular paragraph without having to search through all the other data available in Scrivener. Scrivener Windows Scrivener is a software application for

writers that is widely used in the world of creative writing. It enables you to divide a single project into several documents, which can be later used for multiple purposes. Features: *

Storyboard, allowing you to create a visual representation of the novel's plot

- * A WYSIWYG interface for word processing
- * Support for markup languages, such as HTML, XML, and Markdown
- * Over 100 customizable buttons and features
- * Searching and marking
- * A built-in revision manager
- * Backup and recovery

Dashboard Cola is an application designed to enable users to create interactive dashboards from various data sources, including databases, OLAP cubes, Excel workbooks and web pages. Key features -Supports both server-based and locally stored databases -Supports several databases and a variety of data sources, including databases in SQL Server, Oracle, Firebird, MySQL, PostgreSQL and SQLite. -Connects to Microsoft Analysis Services databases and Extracts from Excel workbooks -Interactive dashboards -Ability to

work on multiple dashboards at once

- Ability to perform concurrent changes
- Ability to collaborate on team projects
- Access to dashboard history
- Select queries and reports
- Charts, gauges, maps, etc. from www.allasoft.org

Dashboard Cola is a powerful data visualization and reporting solution designed to provide you with the means to create interactive dashboards. It is designed to be flexible and yet simple to use, enabling you to add a large number of objects to your project. The first thing you will notice about Dashboard Cola is that it looks very similar to Tableau Public. The latter has all the data you

wish to use in a dashboard on its servers, and you only connect to it using a web browser. Dashboard Cola, on the other hand, enables you to bring data to your local PC, and then use it to create a dashboard. You can either start with a blank project, or use a template. The latter enables you to create your first dashboard within a few clicks, and gives you a visual preview of how the dashboard will look once you finish it. The most important part of Dashboard Cola is the fact that it can handle all sorts of data. You will be able to connect to a wide variety of databases, from SQL Server to Excel. Moreover, you can

also use an OLAP cube or connect to a web site. Dashboard Cola can also extract data directly from a Microsoft Excel workbook. The latter can be used to create dashboards using spreadsheets that have not been designed for that purpose. Dashboard Cola is also able to connect to the following sources:

- Microsoft Analysis Services databases
- Extract data from SQL Server
- Access databases
- Excel workbooks
- Web sites

Dashboard Cola Installation: The application is designed to be installed either as a stand-alone utility or as part of the Tableau Server

What's New In?

Dashboard Cola is a feature-packed application that enables you to create interactive dashboards for data visualization. It is quite easy to use, sporting an intuitive UI, and it even supports multi-user collaboration.

Work with data obtained from a broad range of sources After creating a new project, you can select one or more data sources to be used in your dashboard. If several are added, you can easily switch between them at any time. The application can connect to an existing database, and it enables you to select the data you wish to use with the help of the built-in Query Builder. Among the supported database types,

we can mention SQL Server, Oracle, Firebird, MySQL, PostgreSQL and SQLite. Additionally, it is possible to connect to an OLAP cube in an MS Analysis Services database, as well as extract data directly from an Excel workbook. Design high-quality interactive dashboards Dashboard Cola puts a fairly extensive collection of tools at your disposal, enabling you to enhance your project with charts, pies, gauges, cards, maps, images and more. You can add objects with simple drag and drop actions, something novices will certainly appreciate. Another interesting feature offered by the application is its support for

collaboration on team projects, as it allows multiple users to work on the same dashboard at the same time, while seeing changes in real-time. Lacks documentation, but sports an intuitive UI Unfortunately, Dashboard Cola does not include any documentation, something inexperienced users will not be happy with. While the GUI is well-designed and easy to understand, the lack of a user manual makes the software less accessible to non-experts. All in all, Dashboard Cola is a great application for users who wish to design interactive dashboards using data from various sources. It is powerful and not

particularly difficult to use, but it does lack documentation. What do you think about this zdesktopbuy.com content
