as an option in the Ambiance theme group but can't be used in any other themes. It doesn't change anything else in the theme, including the folder. Sebastian The email field must be a valid email address. This email address can't have any other mail account setup. CS I like the theme, it gives you the possibility to change the rotation and the display mode to center, fill, tile and fit, but I find you can't change the wallpaper as well as you can the dark theme version Eugene Tembolov I installed it and there is a colorful glitch on the right side of the preview window of the wallpapers. It's really annoying. Carlos Love the theme and like the option to change the rotation and display type and all the rest of the options. It's a nice, clean theme. CK The theme works perfectly, it looks like they really thought about what you're talking about here and it does everything they said it would and more. Jakub Good theme. It's hard to put into words the way I feel about this theme. If I had to find one word for it it would be "Inspiration". I do really like the fact that after installing this you can get another theme (included) that has different wallpapers. The download size is only 2 mb. I think that is a bit big. Derrick Amazing theme. Well made with several features. I wish I could have more themes on my desktop. jonathan This wallpapers looks really cool and I don't mind changing the theme wallpaper from time 6a5afdab4c

The manufacture and finishing of exposed wiring on printed wiring boards typically is conducted using metal-clad through-holes and exposed copper interconnect wires. One method of manufacturing such printed wiring boards includes mounting the component, through-hole and wire leads into a printed wiring board using an insulating substrate. Typically, an etched copper clad laminate is bonded to a non-conducting substrate for mounting the leads in the through-holes. The copper clad laminate is drilled to form holes for the leads. The leads are typically soldered to the board. A printed wiring board formed by the above-described method may be coated with a resin and the leads then may be trimmed and fitted to the through-holes to form a self-aligned interconnect system having a coplanarity of the exposed leads with respect to the surface of the board. Such a printed wiring board may be used to form an electrical connector to mate with a complementary electrical connector. Some electrical connectors include a header connector and a receptacle connector. The receptacle connector is mounted on the header connector by welding and with lamination, requiring additional time and expense. There is a need for an alternative technique for mounting a receptacle connector to a header connector.
