They both appear twice, so the code would need to be changed to something like.[Bronchiolitis and croup: therapeutic decision and hospital stay (author's transl)]. The treatment of bronchiolitis and croup was studied in 142 cases of babies under two years of age admitted to the Pediatric Department of Clermont-Ferrand Hospital. This study concerns all the data taken into consideration in the therapeutic decision-making process (timing of the treatment, type of drugs, their dosages, frequency of injections). The characteristics of the disease, which is essentially a mild viral syndrome, have led to the questioning of the role of antihistamines and corticoids in the treatment of the disease. A comparative study of the two most commonly used treatments, corticoids and IV streptomycin, has shown no difference in their efficacy. However, the hospital stay of the children under a combined treatment 3da54e8ca3
