Navigation AutoCAD uses an annotation scheme based on data provided by both the user and a database system. The annotations that can be applied to the objects in the drawing are based on: annotation points (also referred to as annotation tags) annotation ranges annotation lines annotation types. These annotations are then grouped into annotation categories, which are: 'keypoints': annotation points that are used to create and edit the objects that will be created or edited in the drawing. 'ranges': annotation lines that define the extent of the feature being annotated. 'lines': annotation lines that show the edges of an object being annotated. 'texts': annotation text that is relevant to the object being annotated. 'centers': annotation points that define the centroid (center) of an object being annotated. 'features': annotation features that create and edit geometry that will be used to create or edit objects in the drawing. 'annotations': annotations that are created using a specified object. These annotations are used to organize and classify the objects being annotated. The annotations can also be linked to the annotations being created or edited. Annotation types can be defined to have custom colors, styles and fonts, and to be updated to any drawing that the user has open. In addition to annotation types that are associated with objects, there are also annotation types that are only associated with annotation categories. For example, the 'feature' annotation type is only available to annotate features and is not available to annotate annotation categories. Annotation An annotation is a specific type of annotation category. An annotation can be created by dragging or pasting an annotation object (also known as an annotation block or a pick block) onto the drawing. These objects can be dragged and dropped by the user to create annotations on the drawing. These annotation objects have predefined defaults, and the user can edit the size, shape, color and text of these objects to change the annotation that is created. Annotation objects can have the following options: Annotations can be created either above or below the current object's pick handle The pick handle for the object can be cleared, activated, or can be hidden and/or replaced by an annotation object Annotations can be shown in a full-screen mode to scale with the screen. The annotation types can be chosen to appear either above or below the objects. Annotations can be linked to an existing annotation that is created in the drawing or can be 5b5f913d15
