## AutoCAD With Product Key

Take an image of your license key, either save it or export it as a PDF. Go to that link you've been redirected to and click "Install and Rebuild" Make sure that "Use a saved license key" is checked. A: I am not so familiar with your computer set-up (Windows, Mac, Linux, etc.), but in general the three alternatives you list are usually doable: Register a new key from the site: Start here, then click "Create New Key" If the key was already obtained from Autodesk, perhaps you have a cracked version, I would suggest to register your key in the online software (which I don't know how to do, I used the free option for the Mac version) If you don't have an Autodesk account (possible), it's worth mentioning that you can still install and use all software for free, without registering any license for the subscription software; simply click on the free link. However, it's unlikely that you won't be able to export or modify drawings (not sure), so I guess that you should already be doing it anyway. A: I was able to find the right link on the Autodesk web site. First you need to sign in. You will be redirected to the Autodesk site. Go to this link to get the key generator: Note: The zip file contains a sample license. Make sure you select the type of license you have and press the 'Finish' button. Next, download the zip file and unzip it. Download the setup: Install the setup. I was able to install the software and generate the key by right clicking the executable and selecting the option 'Run as administrator'. If you are using Windows, make sure the version of Autodesk AutoCad you are using is not listed in the 'known programs' section. If it is, you may have to download and install the newest version first. A: What you are trying to do is
