Cross Calculator is an application that provides you with a calculation platform for day to day use, while also giving you more functions for advanced scientific calculations.

Cross Calculator, Cross Platform The main schtick about this calculator application that makes it stand out is the fact that you can use it on different devices, having the characteristic of being available on a varied number of platforms. Therefore, you are able to use it either on your PC, no matter if you have Windows Linux or macOS as operating systems, or on devices such as the iPad, iPhone, but also on Android phones and even on an Xbox One, which is pretty cool. **Straightforward interface** A bit simplistic, the user interface displays all its options from

the very start, without you having to access any hidden menus to use its features, which could prove to be beneficial for some or annoying for others. All the functions can be used with any type of input you prefer, either being it the keyboard, mouse or touch input on phones and tablets. Besides the other features, it has an Interactive and Direct expression mode, which can improve and diversify the use of this calculator. Main functions It must be said that it offers a big range of functions, from the most basic ones, like arithmetical, the use of brackets, percentages, or the correction function, all the way to more advanced combinations and calculations. Other features it has available are the Programmer and the Trigonometric related functions, which can come in handy to people that need to work with these types of calculations. And another nifty feature it has is the Expression Recall option, that gives you the possibility to recall and re-evaluate an expression result, just by tapping on it. Simple, but it does its job Compared to its Microsoft

counterpart, Cross Calculator might feel a bit lackluster, both in design and functionality, having fewer different calculation choices. But after all, it is a consistent application and more than enough for someone who wants to use the same application on other devices also, not only on their computer or phone. When you first look at this game on YouTube, you might be thinking: "Hey! Why is it all weird and cartoony?" "Why does the game look so stylised?" "Why is the word "Play" on the screen?"
