What's New In Memory Cleaner?

Memory Cleaner is a great helper when it comes to cleaning your computer's memory. A lot of applications like Windows Explorer, some installed plug-ins, and many other system files can take a lot of memory. In order to allocate the needed memory to the application, they work hard. As a result, your computer's system becomes slower and, after some time, it's actually unusable. As you probably know, the process of selecting the software to be removed includes selecting a set of unwanted files, then choosing to uninstall them. This process works fine only when you are starting the application in the first time. However, after that, even if you select the same files again, they are simply not shown as unwanted. This means that if you are using Memory Cleaner, the unwanted files are never going to be uninstalled. The problem is that a lot of free memory is used up because the application will crash after time. The solution is simple: Memory Cleaner provides a safe and easy way of removing some of these files. We have done the job for you so that you can start using your computer the way it was intended. The software is the first in its category, with an intuitive interface, so you'll get your job done without any problems. What is it about? Memory Cleaner is designed to help you handle the problem of having a large number of files in the memory. This problem often occurs due to the fact that the application that is using the memory is never getting uninstalled. When you delete an application, it normally means the deletion of all the files that were needed to run the application. Unfortunately, this process does not take place if the application is being run in the background. The solution is simple: we've created Memory Cleaner. It's a tiny tool that can solve the issue. Memory Cleaner monitors all programs you use, and once it detects that there is a certain amount of memory wasted (which means that the corresponding file has never been uninstalled) it automatically uninstalls it. Memory Cleaner can do the following jobs: - Uninstall apps - Uninstall shortcut - Uninstall files and folders - Uninstall service - Manage folders - Manage shortcuts - Manage items in My Computer But Memory Cleaner is a lot more. It can collect all kinds of information about you and your computer. It can be used as a memory booster, a
