## Forex Fibonacci Levels (2022)

The most widely used of all the Fibonacci price points, or levels, for any Forex currency pair can be calculated in advance so that the trader will know when to enter or exit the market. In the world of Forex trading a fair amount of money is lost due to lack of proper trading signals. The most dangerous and the most common mistake that traders make is using the wrong entry and exit points for the trades. If you are looking for a reliable and effective trading tool to help you with this process, take a look at the Fibonacci price levels. It is enough to figure out the previous trend extreme points and by the help of the "Forex Fibonacci Levels" calculator you will easily find the Support / Resistance levels. Using the Fibonacci levels, the trader will easily set the exit points for his trades and avoid most of the losses. The Fibonacci calculator is also very easy to use. It is a lightweight application and there are no complex options. The best thing about this tool is that you can easily calculate any of the Fibonacci ratios. Once you find the target levels, just select the currency pair and hit the button. Support and Resistance Levels for Major Forex Pairs – Forex Fibonacci Levels

Description: The most widely used of all the Fibonacci price points, or levels, for any Forex currency pair can be calculated in advance so that the trader will know when to enter or exit the market. In the world of Forex trading a fair amount of money is lost due to lack of proper trading signals. The most dangerous and the most common mistake that traders make is using the wrong entry and exit points for the trades. If you are looking for a reliable and effective trading tool to help you with this process, take a look at the Fibonacci price levels. ## What's New In Forex Fibonacci Levels?

This is a light version of the Fibonacci Levels Calculator for.NET. It is a small, fast and easy to use calculator for Fibonacci levels in any Currency pair. It will calculate Fibonacci levels for long term Fibonacci ratios, Fibonacci retracements and Fibonacci time zones ( for a year, 1 month, 1 week etc). Special features: \* Predictive - This is a very important feature for any trading calculator. It shows the Support / Resistance levels for the next trading move based on previous history. The longer it has been (on the same side), the more accurate it is. \* Support / Resistance - This is a standard feature. It calculates Fibonacci levels for the current session using two recent trading moves. \* Cycle length - This is also a standard feature. It uses the whole history of trading (both success and failure) to find the right support and resistance levels for the current session. \* Accuracy - This is another standard feature. It shows the minimum and maximum expected movement of the price for the current trading session based on previous history. The higher the accuracy, the higher the chance of the predictions to be correct. \* Repetitiveness - You can set the interval of measurements (in days, hours, minutes and seconds) for the moving averages. This makes the tool extremely accurate and fast. \* Option - If you want to use support and resistance levels for a particular trading day, you can use the option to calculate the levels for a single day, a week, a month or a year. \* Tabs - You can set up to 6 different tabs for your Forex trading needs. The first 4 tabs are standard (Forex, Commodities, Currencies and Indices). The last two are special tabs for Fibonacci time zones and Fibonacci retracements. \* Highlighter - The whole tool is easily readable. The numbers in the boxes are on a light grey background. The most important points are highlighted in a different colour. \* Icon - You can choose between 5 different icon formats. You can even use the calculator's icon as your application icon (ask for it by clicking on "Show icon" on the right). This is a very light version of the "Fibonacci Levels Calculator for.NET".
