Q: Добавить в источник шрифта Можно ли сделать так, чтобы после каждого , в нем закодированном тексте, появлялся какой-то стандартный шрифт? А: Никак. Потому что шрифт не содержится в HTML, а выделяется с помощью CSS. Таким образом можно везде писать шрифты: как статичные, так и влитые с помощью CSS.

Q: How to edit SQL Alchemy models after declaration? I have an SQL Alchemy model that I have already declared as part of a custom class. How do I go about creating an alter function to add some extra columns?

```
class MyModel(Base):
    __tablename__ = 'my_table'
    id = Column(Integer, primary_key=True)
    name = Column(String(100))
    age = Column(Integer)
    def __init__(self, name, age):
        self.name = name
        self.age = age
```

My first thought was to overwrite the init function like so:

```
def __init__(self, name, age):
    super().__init__(name
```
