A large community of the AutoCAD user base uses AutoLISP, and develops plug-ins for AutoCAD, and the AutoCAD exchange format, often for enhancing other AutoCAD applications as well as tools used by AutoCAD. AutoCAD's C++ class library, also supports plugins. It is designed to allow AutoCAD developers to extend the functionality of AutoCAD via C++ applications. The plugin architecture allows developers to reuse code and customize an application without having to rebuild the source code. VBA applications AutoCAD VBA (Visual Basic for Applications) supports VBA, a programming language for Microsoft Office, including Excel, Word, Outlook and Access. It is closely related to Visual Basic and Visual Basic for Applications (VBA). AutoCAD VBA allows extensions to AutoCAD. Microsoft Visual Studio, which is integrated with Microsoft Visual Studio 2010, and later versions, is the tool of choice for this extension. A Microsoft Visual Studio project file (.vdproj) creates a working VBA application, which will run from Microsoft Excel. It consists of VBA code, which is executed when the user opens the workbook. This VBA code can access AutoCAD objects. For example, to create a drawing, the code might use some methods in the Application object. AutoCAD Extensions AutoCAD Extensions are tools which are able to read and write data from Autodesk-format drawings. The extensions allow users to create new drawings, copy drawings from one drawing to another, and import and export existing drawings to Autodesk formats. AutoCAD Add-ons Add-ons are small programs which interact with other AutoCAD features and are generally used as AutoCAD extensions. Add-ons are used to automate many functions that would otherwise be performed manually, such as changing color scheme or using a template. AutoCAD Architecture AutoCAD Architecture is a product based on the AutoCAD Civil 3D application and was developed by the architectural division of Autodesk. It was originally released in 2001 and was updated every year until 2011. It is no longer in production. Its user interface is similar to that of Autodesk Civil 3D. The functionality of AutoCAD Architecture includes importing and exporting of 3D models, saving, and sharing of files and documents. It can be used with all AutoCAD extensions as well as Civil 3D drawings a1d647c40b
