Users can mute the video and playback the audio over the video. Can create and play multimedia mashups The software can be of use to anyone that regularly runs clips and prefers customized sounds over the original film soundtrack. Users should note, however, that mashups cannot be saved and are not stored after quitting the program. This being said, the resource could be particularly useful in creating on the spot video presentations with customized music (for example for a holiday or a sports clip). The interface is highly intuitive and the program's functions are essentially divided into two frames: the left side, that handles the videos and the right side that manages audio files. Crisp buttons that correspond to the core functions are placed on either side. There are no menus or tabs and everything is streamlined for quickly processing files. Defining playback timers is possible The software can load source files in most commonly-used formats, including AVI, MPG, FLV, MP4 and MP3. These are clearly displayed in the two separate working frames and errors can be corrected by removing either individual tracks or clearing the whole list. Play Videos With Separate Audio Software Cracked Accounts allows a fair range of user adjustments, including the ability to play just a few seconds from each film. An interesting feature is allowing the program to play all source videos and audios at the same time. This function should not be used with more than 5 source files since it will severely clutter the desktop! The display can be protected with a passcode Users can also choose to loop files, play videos at random positions, as well as define a password-prompt for returning to the desktop. To conclude, Play Videos With Separate Audio Software is a quick solution for playing clips and custom songs at the same time. Play Videos With Separate Audio Software Review I really don't think I'd ever use this program but from all the reviews of this software I've read, it would work great with someone who likes to create their own music while they're watching a video. I guess I'd figure out something different. Pros: It works great with just about any video file. Cons: The only problem is the resource doesn't allow you to save the final file after you've exported it. Doesn't save Another con about this program is there are no options to adjust the volume of the audio. It just plays it at the same level as the video. Great Jun 02, 2015 Pete V.
