Antiword is a utility for converting Word and WordPerfect documents to plain text files. This utility will also convert documents to PostScript TM files, replacing all the fonts in the document. Antiword is written in Visual Basic, and is based on routines coded for Windows NT 3.x and Windows 95. Antiword is 100% free software, and should be available for all platforms, including all major operating systems. Antiword may be used as a stand-alone application or included in a multi-platform suite. Antiword is not a word processor! It is not meant to modify existing files, nor to make a new file from a template. You can use it to read the text of Word and WordPerfect documents, and other binary formats. Antiword can be used to convert your sources to plain text and PostScript files to make them available for printing, conversion to other formats, storage, etc. Antiword can read and write text from external sources, such as an external database, an FTP server, a CD-ROM, a network shared disk, etc. If you have a collection of documents from a certain source, you can use Antiword to quickly convert them all into plain text files. Antiword can convert Word or WordPerfect documents into other formats, such as PNG, GIF, BMP, JPG, HTML, and PDF. All the conversion options are adjustable, so you can control the conversion process to meet your needs. Antiword can convert all the fonts in a document to PostScript fonts. This saves storage space when you want to print the document, and it saves you money when you want to print on a high-resolution, 4- or 6-color printer. Antiword will even replace standard fonts with alternatives designed for true PostScript output, such as Metafont, PDF, and TrueType Fonts. Antiword can save all your personal settings, including templates, styles, keyboard shortcuts, screen savers, logos, and other features. Antiword can convert and/or display all the documents in a directory, or all the documents within a given library. Antiword can process multiple files at the same time and can be used as a batch processor. Antiword can be controlled either from the command line or through a dialog box. Antiword can be used as a dictionary to find a certain word or a replacement word for the first occurrence of another word. For example, if you type "hello," you can find "hello world"
