Review our Indian beta site: Jobz.info - k9asprakash ===== AJackson I'd be careful about depending on someone's personal website for your startup success. If this takes off, it could be a major distraction for the business if something goes wrong. Also, I'm guessing you're going to be promising a fair working environment, competitive pay. Hopefully, you have at least a cursory understanding of the MMORPG market, in case someone even vaguely like what you're doing comes along. Otherwise, you may be getting into something with a LOT of risk. ~~~ k9asprakash we don't expect it to be that lucrative! but we want to give a good experience, and we would like to focus on building a good community. This invention relates to apparatus for characterizing the resistance of a portion of a structure and, more particularly, to apparatus for accurately determining the initial modulus of elasticity of a seat cushion that is used in upholstered furniture. In the construction of certain seating, it is important to know the initial modulus of elasticity of the seat cushion. Many seating systems require an initial modulus of elasticity of approximately 20,000 Pounds per Square Inch (p.s.i.) or more. This value is the average modulus of elasticity of a seat cushion, and as used herein refers to the modulus of elasticity for the high portions of a seat cushion. If the initial modulus of elasticity is too low, the seat cushion will sag in use. If the initial modulus of elasticity is too high, the seat cushion will not provide the necessary support for the user. It is often difficult to ascertain the initial modulus of elasticity of a seat cushion. The elasticity may vary with the construction of the seat cushion, with the amount of stuffing used, with the method used to stuff the seat cushion, and with the method used to sew the seam. Some cushion constructions may have high initial modulus of elasticity, but as they
