Of course, editing is a common activity that we do on our computers and our phones, but it's a different skill set from artistic or design skills. If you can use a computer, you can Photoshop, but it's not enough to be able to use Photoshop unless you can also use common design or artistic skills. Designing the first Photoshop layers Photoshop comes with a number of different tools that you use to draw and edit images. For example, you use the Rectangle or Line tool to draw lines and circles to create shapes, and the Toolbox gives you shortcuts for common tasks. Photoshop has layers (more on layers in a moment) that enable you to draw or edit an image, and a document (more on documents in a moment) that keeps your layers organized. Photoshop puts some of the commands into the menus on the right side of your monitor, where they are easy to access but not always easy to see, and has a few other commands that are part of its menus, like the History panel on the left side of the menu bar. You start editing images with the Layer dialog box (see Figure 10-1). Choose File → New and select Layer from the menu to open the dialog box. You can use the default options or adjust the settings as described in the next section. Figure 10-1: The very first thing you do with Photoshop is make a layer. The Photoshop layer system enables you to create and organize layers to draw on images. You can create a new layer by right-clicking and choosing Add Layer, or by clicking the Layer dialog box and selecting the New Layer option. Photoshop hides the previous layers and places the layer you select in its own layer channel. Adjusting the default settings of a new layer You create a new layer, but before you can start drawing, you must first adjust the settings that control how the layer is displayed. Select the Layer dialog box and open the Options tab. The Default Settings section allows you to adjust the opacity level of the new layer so that you can control how the layer appears onscreen. You can also set the Opacity percentage value, which is the percentage of gray that makes up the solid color used to display the layer. The opacity values range from 100 (opaque) to 1 (transparent). The Layer Background section allows you to apply an alpha transparency setting so that you can see the layers below the current active layer. An alpha transparency setting is a

Q: String::substr(): start parameter 1 does not point to an array in C program In main() I get this error: "String::substr(): start parameter 1 does not point to an array" Here's my code: #include #include #include int main() { char word[500]; scanf("%s", word); printf("%s", word); strcpy(word, word); strcat(word,"er"); printf(" %s", word); return 0; } A: strcat(word,"er"); You are trying to concatenate a char array onto a string. That's not allowed. The first array element is not stored in the string (as it's not an array), but somewhere between the 1st and 2nd array elements. To concatenate the string literals "Hello" and "er" onto the string word, use: strcat(word, "er"); // ^^^^^^^^ // added A: If you are trying to append character array "er" to the first array element of word then strcpy(word, word); strcat(word, "er"); will do. If you are trying to append one character array to other then char word[100] = "Hello"; char word2[100] = "Word"; strcpy(word, word2); //copying not appending strcat(word, "er"); //gives same error You can try char word[100] = "Hello"; char word2[100] = "World"; word2[0] = '\0'; strcpy(word, word2); // Copying strcat(word, "er"); // Gives same error Q: Can human Mars travel be made to become part of a single Hohmann Transfer orbit? So far, the 2012 campaign has been one of the most unpredictable and eventful in modern US history. The race for the White House has taken on a quixotic quality, with candidates lurching left and right, up and down, and sometimes, even off a cliff. Governments across the world, especially in Europe, are in a state of disarray and are turning to the US for help, as the European Union struggles to find a way out of the current crisis. The US economy is also in a parlous condition; even though it is improving, that improvement is sluggish and uncertain. A major focus of those states struggling with Europe is the issue of jobs. At a time of economic uncertainty, the US, with its fading “confidence in the future,” must provide a clear path out of that uncertainty by establishing a strategy to re-build growth, create jobs, and improve the income inequality that has grown to threaten the very fabric of our nation. A job strategy that is economically sound is a matter of basic economic policy — it could be the most basic issue in this election, and one that is never considered — yet one that is critical to the future of our democracy. We can go from dealing with a slow-motion crisis to a rapid-fire crisis. The numbers are telling: For every job created in the US, three jobs are lost. Over the past decade, we lost almost 8 million jobs, as companies chopped their workforces to downsize in order to boost profits by slashing wages and benefits. Now that we are coming out of that recession, employment is recovering, but only at anemic levels, and growth in nonfarm employment remains so weak that, in the months ahead, we might be back to our situation before the recession struck. As long as nothing is done about the jobs crisis, the US will never regain a sufficient level of employment to create the demand needed to generate a sustainable recovery. In addition, the problem of income inequality has been worsening since the 1970s — the top 1 percent of Americans now have the same share of total income as the bottom 90 percent. If we are to reverse that situation, we must create a more equal, pro-growth economy, which, in turn, will require the creation of new jobs. To do this, we have to understand the role of the US dollar and the dollar’s current vulnerability. Why is the US dollar so vulnerable?
