LogicosteSynthesis and
antibacterial activities of water
soluble thiazolidinones and
thiosemicarbazone derivatives.
Some novel water-soluble N-

thiosemicarbazone and N-thiazolidinone derivatives bearing a functionalized 6-chlorobenzo[c][1,2,5]thiadiazine-4-one (2a) or a benzothiazole moiety (2b) were synthesized. The structures of these compounds were identified by IR, NMR, and elemental analysis techniques. The compounds were tested for their antibacterial activity against six bacteria. The results indicated

that 2a and 2b inhibited the growth of *Staphylococcus aureus* and *Pseudomonas aeruginosa*, with minimum inhibitory concentrations (MICs) of 16 µg/mL and 128 µg/mL, respectively.

Compound 2a had a good antifungal activity against *Candida albicans*, with an MIC value of 64 µg/mL.#
