If you're looking for a solution that brings together elements of Illustrator and Photoshop, Paint Shop Pro Premium has many of the tools you need. Adobe offers a free version of PS Premier (www.adobe.com/products/ps/premier/free.html). This package, however, lacks many of Photoshop's features. It is best for beginners who want to keep painting with the look of Photoshop. Photoshop's enormous popularity is reflected in the fact that most graphic designers who don't know Photoshop tend to fall into a few commonly made mistakes: Poor image resolution: For print, a pixel-based resolution of 72 dots per inch (dpi) is sufficient, but for the Web you need a much higher resolution so that an image doesn't require multiple passes to download and view. A pixel-based size of 300 DPI is what's commonly recommended for Web graphics. Poorly composed composition: A pixel-based image almost always has a white space on each side, so images can end up being quite large. In some cases, some picture-editing applications don't automatically adjust the width and height of an image, so it might end up being that you don't have the right proportions, resulting in a poor composition. Another aspect of composition to look out for is whether the colors have a high contrast ratio between them, so that they look brighter when they're next to each other, as shown in Figure 5-6. **Figure 5-6:** A high contrast in colors makes it possible to read the text. Poor cropping: Images can be cropped properly with a set of guides that let you position the object easily on the edge of the canvas. Often, the edge of the canvas does not have a specific line to match it, so if you crop improperly, you can end up with odd results, such as a top-to-bottom crop, as shown in Figure 5-7. **Figure 5-7:** Cropping is a critical step, but often isn't done right. Illustrator is the older of the two graphic-design applications, and is considered by many to be more of a traditional artist's tool, while Photoshop is a more modern image-editing solution. Illustrator is a vector-based program, which means that an object's dimensions are measured in pixels rather than by the number of dots that make up a physical line. This means that if an object

Q: How to remove firebase user at startup? I have an app which uses Firebase Analytics and Firebase Messaging. If the user is logged in to the app for the first time, firebase auth will show a logout screen asking for permission to use the app. When the user clicks the "Ok" button, it logs the user out from Firebase auth. My question is, how can I remove the user from firebase auth/user table when the user logs in. I am using Firebase Crashlytics as well. To further clarify, I have a splash screen which checks if the user is logged in to Firebase auth using Firebase auth object. If the user is logged in, it launches the app. If the user is not logged in, it launches the login screen. I want to remove the user from firebase auth when the user logs in. A: I just had to do this. I started the app with google assistant and the app didn't log me in. Eventually, I had to remove the session token from firebase. To do this: Go to the firebase console app settings Click on Sessions Click on the session token that you want to remove Remove it Wait for 2 minutes If you don't see it in the console, don't worry, refresh the page This was supposed to happen automatically, but apparently it doesn't work. Hope it helps!

Postprandial hyperglycemia does not predict adverse cardiovascular outcomes in patients with diabetes who are not on a lipid-lowering agent: a retrospective cohort study. To examine the association of postprandial hyperglycemia with adverse cardiovascular events in patients with diabetes who are not on a lipid-lowering agent. Retrospective cohort study. Patients with type 2 diabetes (n = 8,068) at Kaiser Permanente Northern California aged 30 to 79 years without a history of cardiovascular events. Level of postprandial hyperglycemia was measured using the postprandial plasma glucose area under the curve from 2 to 24 hours after a test meal. The primary outcome was a composite of major adverse cardiovascular events (MACE), including heart attack, stroke, hospitalization for acute coronary syndrome, and coronary revascularization. The median follow-up time was 6.4 years. The level of postprandial hyperglycemia was not associated with MACE in a time-to-event model (relative risk [RR], 1.04; 95% CI, 0.97-1.12 for the highest vs the lowest quartile) in multivariable analysis that adjusted for traditional cardiovascular risk factors and markers. The association was independent of baseline characteristics including age, sex, body mass index, smoking, low-density lipoprotein cholesterol, high-density lipoprotein cholesterol, blood pressure, glycated hemoglobin, and markers of glucose metabolism (fasting plasma glucose, 2-hour oral glucose tolerance test, hemoglobin A1c, and glucagonlike peptide-1). In patients with diabetes who are not on a lipid-lowering agent, the level of postprandial hyperglycemia measured during a meal tolerance test is not associated with an increased risk of cardiovascular events.
