The invention relates to a method of operating an apparatus for machining workpieces or an apparatus for machining workpieces and the use of at least one servomotor. Machines having servomotors, which make up a drive train for the movable components of the machine, are known. In the prior art it is customary to use the supply current of the servomotor, the load torque of the servomotor and the speed value of the servomotor for the purpose of adapting the drive force. The load torque of the servomotor is determined by a tachometer via an electrical variable resistor in order to change the servo-current, while the speed value of the servomotor is determined by a tachometer via an electrical variable resistor or the like. Accordingly, it is an object of the invention to provide a method of operating a machine which operates with particularly low energy consumption.

 T.type = 2 THEN DT1 END AS DT1, CASE WHEN T.type = 3 THEN DT1  
 END AS DT2 FROM TableName AS T ) AS T1; Output: +-----+-----+ | DT1 |  
 DT2 | +-----+-----+ | 15 | .7 | | 15 | .4 | +-----+-----+ 2 rows in set (0.00
